

Luncheon Seminar

eSource and the Future of Early Phase Clinical Research

As eSource continues to generate buzz throughout the clinical research industry, more and more real-life use cases are starting to arise. This presentation will offer a detailed case study of Medrio's eSource tool, and how it has enhanced operations in early-phase clinical trials across the globe.

Content:

- We will explore how two Phase I units located in Australia and Japan utilize eSource to make their clinical trials faster and more efficient.
- Representatives from Medrio and those innovative Phase I units will outline the business case for replacing paper-based data capture with eSource, both from a regulatory perspective and as an ideal solution for Phase I studies.
- We will offer insight into the site-level experience of navigating a tablet-based eSource tool, eCOA through a demonstration of Medrio eSource.
